Personal Experience

- Food Lab Product Landing Page

This is a page created for a fictional company called "Food Lab". This page is purely a demonstration of my front-end skills. Therefore, it is not fully functional, as there is no back-end.
Live Link : https://whimsical-basbousa-548b08.netlify.app/
GitHub Link : https://github.com/KevinSlim67/Food-Lab-Product-Landing-Page

- Hardware Store E-Commerce Website

This is a website created for a fictional company that sells electronic smart devices. This was my first MERN Stack application. Meaning it was made using MongoDB, Express.js, React.js and Node.js. It made me much more comfortable with frontend, and it was also my first introduction to backend.

GitHub Server-Side Link : https://github.com/KevinSlim67/Hardware-Store-Server

- Chess Game

This functional Chess Game was made using the Swing framework in Java. It got me much more comfortable with writing Object Oriented Programming, and it was also my introduction to creating GUIs in Java.
